MINING WEEK

Echo Resources (EAR) has recommenced its reverse circulation drill program targeting the Julius deposit at its Yandal project in Western Australia. Previous drill intercepts at Julius include 6m at 11.8g/t from 106m in fresh bedrock and 16m at 4.5g/t from 55m in weathered bedrock. The new program will infill gaps in the previous RC program and test from deeper mineralised zones in fresh bedrock.

Echo Resources closed down 3c at 23c.
