**(EAR) Echo Resources Julius Deposit Encounters Further Gold Intersections**  
7-Dec-2007

Echo Resources Limited announced further 1metre sample assay results from four reverse circulation drill holes completed at the Julius Deposit, located 60km south of the multi-million ounce Jundee Gold Mine in Western Australia. All four drill holes returned significant intercepts from multiple zones of gold mineralisation. The intersected mineralisation at Julius being defined over an area of approximately 1,300m long by up to 650m wide, and is open to the north and west.

The company says that potential at the project for additional gold mineralisation discovery is excellent.
